

# General Chemistry 1 (CHEM 1141)

## Shawnee State University – Autumn 2022

November 10, 2022

### Exam # 3A

Name \_\_\_\_\_

*Please print your full name, and the exam version (3A) that you have on the scantron sheet!*

*(Bubble in the best answer choice for each question on the scantron sheet in pencil!)*

Please  check the box next to your correct section number.

<b>Section #:</b> <input type="checkbox"/> 1. (Mon Lab, 10:10 AM – 1:00 PM)	}	<b>Fleeman</b>
<input type="checkbox"/> 2. (Wed Lab, 10:10 AM – 1:00 PM)		
<input type="checkbox"/> 3. (Tue Lab, 11:00 AM – 1:50 PM)	}	<b>Napper</b>
<input type="checkbox"/> 4. (Thu Lab, 11:00 AM – 1:50 PM)		

**Multiple Choice:** \_\_\_\_\_ / 50

**Q21:** \_\_\_\_\_ / 10

**Q22:** \_\_\_\_\_ / 10

**Q23:** \_\_\_\_\_ / 10

**Q24:** \_\_\_\_\_ / 10

**Q25:** \_\_\_\_\_ / 10

**BONUS:** \_\_\_\_\_ / 3

**TOTAL:** \_\_\_\_\_ / 100

**Each problem in this section (multiple choice) is worth 2.5 points!**

- Q1. The distance between adjacent crests on a wave is called:
- A) frequency
  - B) amplitude
  - C) wavelength
  - D) quanta
- Q2. An endothermic reaction has:
- A) a positive  $\Delta H$ , absorbs heat from the surroundings, and feels cold to the touch
  - B) a positive  $\Delta H$ , absorbs heat from the surroundings, and feels warm to the touch
  - C) a negative  $\Delta H$ , gives off heat to the surroundings, and feels cold to the touch
  - D) a negative  $\Delta H$ , gives off heat to the surroundings, and feels warm to the touch
- Q3. Choose the reaction that illustrates  $\Delta H^\circ_f$  (standard enthalpy of formation) for  $\text{Mg}(\text{NO}_2)_2$ .
- A)  $\text{Mg}(s) + \text{N}_2(g) + 2 \text{O}_2(g) \rightarrow \text{Mg}(\text{NO}_2)_2(s)$
  - B)  $\text{Mg}^{2+}(aq) + 2 \text{NO}_2^-(aq) \rightarrow \text{Mg}(\text{NO}_2)_2(aq)$
  - C)  $\text{Mg}(s) + 2 \text{N}(g) + 4 \text{O}(g) \rightarrow \text{Mg}(\text{NO}_2)_2(s)$
  - D)  $\text{Mg}(\text{NO}_2)_2(s) \rightarrow \text{Mg}(s) + \text{N}_2(g) + 4 \text{O}_2(g)$
- Q4. The value of  $\Delta H^\circ_{\text{rxn}}$  for the following reaction is  $-6535 \text{ kJ/mol}$ .
- $$2\text{C}_6\text{H}_6(l) + 15\text{O}_2(g) \rightarrow 12\text{CO}_2(g) + 6\text{H}_2\text{O}(g)$$
- How many kilojoules of heat will be evolved during the combustion of 16.0 g of  $\text{C}_6\text{H}_6(l)$ ?
- A) 679 kJ
  - B) 659 kJ
  - C) 335 kJ
  - D) 669 kJ

- Q5. When an automobile engine starts, the metal parts immediately begin to absorb heat released during the combustion of gasoline. How much heat will be absorbed by a 165 kg iron engine block as the temperature rises from 15.7°C to 95.7°C? (The specific heat of iron is 0.489 J/g·°C.)
- A) 6250 kJ
  - B) 6.25 kJ
  - C) 6.45 kJ
  - D) 6450 kJ
- Q6. Which of the following visible colors of light has the longest wavelength?
- A) blue
  - B) green
  - C) red
  - D) violet
- Q7. Which one of the following sets of quantum numbers is not possible? ( $n, l, m_l, m_s$ )
- A) 4, 3, -2, +1/2
  - B) 3, 0, 1, -1/2
  - C) 3, 0, 0, +1/2
  - D) 2, 1, 1, -1/2
- Q8. Given the following thermochemical equation:
- $$3A \rightarrow 4B + C \quad \Delta H = -24 \text{ kJ/mol}$$
- determine the value of  $\Delta H$  for the reaction:
- $$2C + 8B \rightarrow 6A \quad \Delta H = ??$$
- A) +24 kJ/mol
  - B) -42 kJ/mol
  - C) +48 kJ/mol
  - D) -48 kJ/mol

- Q9. What is the maximum number of p orbitals allowed?
- A) 0
  - B) 1
  - C) 3
  - D) 5
- Q10. What is the wavelength of radiation that has a frequency of  $5.39 \times 10^{14}/\text{s}$ ?
- A)  $1.61 \times 10^{23}$  nm
  - B)  $1.80 \times 10^{-3}$  nm
  - C) 618 nm
  - D) 556 nm
- Q11. A system where neither heat nor matter can flow between the system and the surroundings is called:
- A) Open
  - B) Sealed
  - C) Closed
  - D) Isolated
- Q12. The SI derived unit for energy is the:
- A) Calorie
  - B) Joule
  - C) Erg
  - D) Kilowatt hour
- Q13. If object A has twice the specific heat capacity and twice the mass of object B, then an equal amount of heat absorbed by the two objects results in what temperature change?  
(Assume no phase transition occurs.)
- A) Object B will increase in temperature by twice that of object A
  - B) Object A will increase in temperature by twice that of object B
  - C) Object B will increase in temperature by four times of object A
  - D) Object A will increase in temperature by four times of object B
  - E) Objects A & B will both change by the same temperature

- Q14. Enthalpy is an example of a state function. This means that:
- A) Changes in enthalpy depend upon the way the process is carried out
  - B) The value of enthalpy does not depend upon the pressure
  - C) The value of enthalpy is independent of temperature
  - D) Changes in enthalpy do not depend upon the path taken
- Q15. Which substance has a standard enthalpy of formation of zero?
- A)  $\text{N}_2(\text{g})$
  - B)  $\text{Cl}(\text{g})$
  - C)  $\text{C}(\text{s, diamond})$
  - D)  $\text{He}(\text{s})$
- Q16. The Greek letter used for the **frequency** of a wave is:
- A) nu ( $\nu$ )
  - B) lambda ( $\lambda$ )
  - C) alpha ( $\alpha$ )
  - D) psi ( $\psi$ )
- Q17. Which of the following transitions in a hydrogen atom would result in **emission** of the **longest wavelength** of light?
- A)  $3 \rightarrow 2$
  - B)  $3 \rightarrow 1$
  - C)  $2 \rightarrow 3$
  - D)  $1 \rightarrow 3$
- Q18. Which quantum number primarily determines the shape of an orbital?
- A)  $n$
  - B)  $l$
  - C)  $m_l$
  - D)  $m_s$

Q19. Which quantum number primarily determines the size of an orbital?

A)  $n$

B)  $l$

C)  $m_l$

D)  $m_s$

Q20. Which quantum number primarily determines the orientation of an orbital?

A)  $n$

B)  $l$

C)  $m_l$

D)  $m_s$

Q22. Two solutions, initially at  $24.69^{\circ}\text{C}$ , are mixed in a coffee cup calorimeter. When a  $200.0\text{ mL}$  volume of  $0.100\text{ M AgNO}_3$  solution is mixed with a  $100.0\text{ mL}$  sample of  $0.100\text{ M NaCl}$  solution, the temperature in the calorimeter rises to  $25.16^{\circ}\text{C}$ .

**(a)** Write a balanced equation for the process.

**(b)** Determine the  $\Delta H^{\circ}_{\text{rxn}}$ , in units of  **$\text{kJ/mol}$** . Assume that the density and specific heat of the solutions is the same as that of water. The density of water is  $1.00\text{ g/mL}$  and the specific heat of water =  $4.184\text{ J/g}^{\circ}\text{C}$ .

Q23. **(a)** Calculate the wavelength of light emitted or absorbed when the transition  $n=6 \rightarrow n=3$  occurs.

**(b)** Determine if this transition from  $n=6 \rightarrow n=3$  represents an **emission** or an **absorption**. Circle the correct choice in bold.

Q24. Fill in the blanks. For each blank, choose an answer choice from the word bank provided below. There are more answer choices than blanks.

**0 1 2 3 4 Wavelength Energy Frequency Infrared  
Ultraviolet Gamma rays X-rays Microwave Radio waves Ground-  
state Excited-States Emission Absorption Principal quantum  
number (n) Angular momentum quantum number (*l*) Magnetic  
quantum number (*m<sub>l</sub>*) Electron spin quantum number (*m<sub>s</sub>*)**

The electrons in a hydrogen atom can exist in various energy levels described using the quantum number  $n$ . The lowest energy level corresponds to a value of  $n =$  \_\_\_\_\_ and is called the \_\_\_\_\_. Higher energy levels are referred to as \_\_\_\_\_. When an electron transitions from (say)  $n = 4$  to  $n = 2$ , this results in the \_\_\_\_\_ of a photon of EM (electromagnetic) radiation. When comparing two sets of transitions, the one with the largest energy difference will result in the photon having a smaller \_\_\_\_\_.

The EM (electromagnetic) spectrum consists of various named regions. The region next to visible light with a slightly shorter wavelength is called \_\_\_\_\_, whereas the region next to visible light with a slightly longer wavelength is called \_\_\_\_\_. In general, photons with extremely high frequency are referred to as \_\_\_\_\_, whereas photons with the extremely low frequency are called \_\_\_\_\_.

Atoms have four different quantum numbers that are used to describe their orbitals.

The one that primarily determines the energy of an orbital is the

\_\_\_\_\_.

Q25. **(a)** Write out the chemical equation that corresponds to the standard enthalpy of formation reaction for 1-propanol,  $\text{CH}_3\text{CH}_2\text{OH}$ .

**(b)** A 3.22 g sample of metal absorbs 56.0 J of heat and changes temperature from  $23.3\text{ }^\circ\text{C}$  to  $54.4\text{ }^\circ\text{C}$ . Calculate the (i) heat capacity of the metal, and (ii) the specific heat capacity of the metal.

**(c)** Calculate the frequency of a photon with a wavelength of 455 nm.

### 3 Point Bonus Question

**What combination of quantum numbers is referred to as a *subshell* in the quantum mechanics of an atom?**

## Exam checklist:

**(Check the boxes to certify the following:)**

- My full name is written legibly on the front page
- My correct lab section has been indicated on the front page
- My full name is written legibly on the scantron sheet
- My exam version (A, B, C, or D) is written on the scantron sheet
- I have shown work for all problems (where appropriate), paying attention to
  - Significant figures / decimal places
  - Units
- I have used the conversion-factor method for all conversions
- If I have torn off the back page (periodic table), I will not turn it in with my exam!

Thank you from the Chemistry Professors and Good Luck!

### Useful information:

$$q = m \cdot s \cdot \Delta t \quad \text{or} \quad q = m \cdot c \cdot \Delta t \quad q = C \cdot \Delta t$$

$$c = v \cdot \lambda \quad E = h \cdot c / \lambda \quad E = h \cdot v$$

$$c = 3.00 \times 10^8 \text{ m/s} \quad h = 6.626 \times 10^{-34} \text{ J}\cdot\text{s} \quad R_H = 2.18 \times 10^{-18} \text{ J}$$

$$N_A = 6.022 \times 10^{23}$$

$$\lambda = \frac{h}{mv} \quad E_n = -R_H \left( \frac{1}{n^2} \right)$$
